

Claridges install DVS Urinal Controls in their washrooms to save water...

Dart Valley Systems Ltd have been working closely with Claridges to help reduce water consumption within their washrooms facilities at their London Mayfair Hotel.

After site visits and discussions between both parties Claridges decided on the DVS Flushmatic urinal control for a discreet yet powerful solution.

The Flushmatic urinal control is known to help reduce water consumption by up to 80% as well as improving hygiene and upgrading facilities.

Dart Valley Systems have regionally based installation and service engineers, Claridges agreed to have a DVS engineer install all urinal controls so that all requirements were met efficiently.

DVS believe this provides customers with an efficient, high standard installation and after sales service. All products are guaranteed on site for two years after the date of installation, this mean an engineer can visit again within those two years to resolve any problems free of charge.

Prior to installation of Flushmatics, a site survey detailed an estimation of water and money that could be saved. As you can see in the table below the results show a high saving and DVS estimated a payback period of only 6 months.

	Approx m ³ used per year	£ used per year at £1.69 per m ³ (Thames Water & Sewage)
Uncontrolled	2208	£3,730.71
Controlled	552	£932.68
Savings	1656m³	£2,798.03

Claridges already have DVS intelligent taps installed and will be looking at other areas in the washrooms where water can be saved for the future.
