

### AQUAPAY

A high level of water consumption and the steady increase in operating costs are typical of shower facilities. One main reason for this is the unlimited provision of free water, heavy usage and constantly changing clientele.

In response to this issue, the AQUAPAY system for chargeable water delivery provides operators of public and private shower facilities with an efficient solution. This system makes operating shower facilities more economical, it saves valuable water and energy resources and enables the cost of the facilities to be easily calculated.

### FEATURES\_

- Economical operation of shower facilities
- Responsible use of valuable water and energy resources
- Only pay for actual water used
- Adjustable water delivery time per coin/token
- Residual time can be deleted after a programmed time of non-use
- Can be switched to unpaid water delivery, e.g. when being used for school facilities

### OPTIONS
