

# AQUAPAY CHARGEABLE WATER DELIVERY

Economical showering saves resources

## THE AQUAPAY SYSTEM – ECONOMICAL AND FAIR

A high level of water consumption and the steady increase in operating costs are typical of public shower facilities. There are various reasons for this: the unlimited provision of free water, heavy usage and a constantly changing clientele. This is added to by the lack of user awareness of the costs and the responsible use of drinking water.

In response to this issue, the AQUAPAY system for chargeable water delivery provides operators of public shower facilities with an efficient solution. This system makes operating shower facilities more economical, it saves valuable water and energy resources and enables the cost of the facilities to be easily calculated.

The AQUAPAY coin-activated controllers are connected to the AQUA 3000 open water management system.

When interacting with the intelligent control technology of AQUATIMER and PROTRONIC - A3000 open shower fittings, this system enables an individual and fair method of payment for actual water consumption. The resulting reduction in operating expenses goes hand in hand with state-of-the-art electronic fittings that offer comfort and hygiene to the user.

Three different models of these coin-operated controllers provide different solutions for different applications: in single shower facilities for controlling a single AQUA 3000 open shower fitting, multiple shower facilities for controlling a maximum of 31 shower fittings of this type, and for volume-dependent water delivery, for example in filling stations in yacht harbours for filling up drinking-water tanks.

### System advantages

- Economical operation of shower facilities
- Responsible use of valuable water and energy resources
- Only the actually used water-time is paid for
- Water-delivery time per coin/token is adjustable
- Residual time can be deleted after a programmed time of non-use
- Can be switched to unpaid water delivery

### Application areas

- Camping sites
- Shower rooms in sports facilities used by schools and clubs
- Swimming baths
- Leisure centres
- Car-wash facilities
- Filling stations
- Yacht harbours

## Features

- For single shower facilities
- For multiple shower facilities with maximum 31 AQUA 3000 open fittings
- For volume-dependent water delivery
- Optionally for coin (0.50 EUR) or token operation
- Sturdy stainless-steel casing with safety lock
- With display for operating condition and special functions, such as for performing a thermal disinfection

## Customised parameter definition

With the help of a web server which is integrated in the ECC2 function controller and the visualisation via a web browser, the user is provided with the following configuration options:

- Adjustment of water-delivery duration per coin/token in steps of one second up to a total of 8 minutes
- Setting the time window until the shower facility becomes available after paying
- Time until the credited amount is deleted when not used

# THE COIN-OPERATED CONTROLLER – LOGICAL AND WITH MANY FEATURES

The easy to operate AQUAPAY coin-operated controllers feature a logical user guide that is second to none. When several showers are connected, the shower unit can be simply selected by pushing a button on the coin-operated controller. After up to 30 coins or tokens have been inserted, the display shows the time account and the selected shower is by default enabled 10 seconds later.

The person using the shower pays only for the time that water is in use. He or she can interrupt the flow of water with the fitting as often as required, without this having any effect on the effective usage time that was paid for in advance. In the basic configuration, the water-flow time per coin is 3 minutes.

To ensure problem-free shower operation, any residual credit is deleted after a factory-set default time of 5 minutes of non-usage.

Operation with tokens offers maximum theft protection for the operator. When operated with coins, an intelligent coin tester facility ensures that no invalid coins can be used.

Of course, the new AQUAPAY system has a switch with which the system can be turned to unpaid water delivery, for example when the shower facilities are being used by schools.

#### Overview of shower fittings

- Fittings with Piezo-button or with infrared sensor
- Thermostat fittings with convenient temperature selection
- Concealed in-wall installation models with sturdy stainless steel cover plate
- Shower panels made of stainless steel, mineral material MIRANIT or with glass front. For easy on-wall installation without structural interventions

## THE SHOWER FITTINGS – INTELLIGENT AND EASY TO USE

AQUAPAY coin-operated controllers are being provided in combination with the new shower fittings generation that is part of the AQUA 3000 open water management system. With AQUATIMER showers, the user triggers water flow by lightly touching the Piezo-button. An integrated start/stop function makes it possible to interrupt water flow, for example to allow the user to soap hands or wash hair. During this activity the timer for delivering the prepaid water is stopped and continues only when the fitting is actuated again. PROTRONIC shower fittings have an infrared sensor that triggers water flow without any contact.

The shower fittings are available for connection to pre-mixed warm water or as a comfort version equipped with a thermostat.

These electronically controlled fittings provide the operator with the additional benefit that thermal disinfections can be performed easily as a measure to ensure drinking-water hygiene.

Last but not least, each new-generation AQUA 3000 open shower fitting provides the option to incorporate customer-specific payment systems.

If there is already an AQUA 3000 open installation and it should be extended with AQUAPAY then this can be done very simply. The installation can be checked whether your system is "Aquapay-ready", or whether hardware or software upgrades are necessary – all of which can be done through the Franke customer service.

# INSTALLATION PROCESS – EASY AND FAST

With the help of a mounting frame, the coin-operated controller is mounted on a wall outside of the splash area.

With individual shower facilities, the AQUATIMER or PROTRONIC A3000 open shower fitting is connected to the coin-operated controller via two connector cables, while multiple shower units are connected via the system cable. The maximum cable length in multiple shower facilities is 200 m.

The overall system is electrically powered via an ECC2 function controller from the AQUA 3000 open range of accessories. It can power up to 31 shower fittings and the coin-operated controller.

## Installation components at a glance

To completely equip your shower room facility with the AQUAPAY system you will need just 6 components:

- 1 AQUAPAY coin-operated controller
- 2 AQUATIMER or PROTRONIC A3000 open shower fitting. A contact water meter (a) and a self-closing solenoid valve (b) for volume-dependent water delivery
- 3 ECC2 function controller with integrated power supply and Ethernet connection
- 4 System cable for power supply and communication
- 5 Terminating resistor
- 6 Web browser (recommendation: Internet Explorer (from version 8), Firefox (from version 9)) for building-specific configuration options

# AQUAPAY Coin-operated controller

VIEW	TYPE / MODEL	ITEM-NUMBER
------	--------------	-------------

### Coin-operated controller for single shower

AQUAPAY coin-operated controller for paid water delivery for controlling an A3000 open shower fitting. Shower duration for one coin is selectable in steps of one second up to a total of 8 minutes, preset to 3 minutes, maximum number of coins 30. Automatic interruption of shower-duration when water is not being withdrawn, display for residual time. Residual time is deleted after 1-30 minutes of non-use, preset to 5 minutes. Can be switched over to unpaid water delivery. Mechanical coin tester with opto-coupler for coins or tokens. Rugged stainless steel housing for on-wall mounting, with safety lock. 24 V DC

240 × 220 × 130 mm (W × H × D)

<b>AQUA800</b>	for tokens	<b>2000100340</b>
<b>AQUA801</b>	for 0.50 €	<b>2000100342</b>

### Coin-operated controller for max. 31 showers

AQUAPAY coin-operated controller for paid water delivery for controlling 2 - 31 A3000 open shower fittings. Display for user guide and display showing free shower units, key selectable. Shower duration for one coin is selectable in steps of one second up to a total of 8 minutes, preset to 3 minutes, maximum number of coins 30. Shower duration is interrupted when water is not withdrawn; residual time is deleted after 1-30 minutes of non-use, preset to 5 minutes. Can be switched over to unpaid water delivery. Mechanical coin tester with opto-coupler for coins or tokens. Rugged stainless steel housing for on-wall mounting, with safety lock. 24 V DC

240 × 220 × 130 mm (W × H × D)

<b>AQUA802</b>	for tokens	<b>2000100418</b>
<b>AQUA803</b>	for 0.50 €	<b>2000100419</b>

### Optional accessories:

Numbering plate for shower units from 0 to 9. From shower number 10, each shower unit requires two plates. Please indicate numbers and quantity when placing the order. 85 × 125 mm (W × H)

## AQUATIMER - A3000 open shower fitting

AQUATIMER – A3000 open, electronically time-controlled shower fitting DN 15 for in-wall installation, with a facility for paid water delivery via AQUAPAY coin-operated controller, and a feature for externally controlling functions such as fitting settings and communication via ECC function controller. 24 V DC. For connecting to pre-mixed warm or cold water supply. With flush mounting cabinet, watertight electronic T-junction as well as electronic module, solenoid valve, stainless steel cover plate with Piezo-button with start/stop function.

Integrated control functions: Flow duration 30 sec., hygiene flushing.

Additional functions with ECC function controller (Ethernet): Automatic thermal disinfection, safety switch-off, cleaning switch-off.
