

Cherry Creek Youth Justice Centre Improving Community Safety with Dart Valley Products

A new youth centre's development is underway to the west of Werribee, in the surrounding area of Cherry Creek and Dart Valley Systems have provided products from the Safe Ensuite range for the project.

The Safe Ensuite range is manufactured from Glass Reinforced Polyester (GRP) which is a single skin configuration that has three different weaves of glass fibre to give the product a good internal structural integrity, this is then impregnated with polyester resin to matrix it all together to produce the strong and extremely durable composite material. GRP is virtually unbreakable and ideal for high security and correctional facilities.

The range of products provided are as follows:

178 x [VR01-010](#) High Security Ligature Resistant Toilet

37 x [VR01-072](#) V2 High Security WC Pan Less Able with Grey Top

The Community Safety Building Authority hopes that the new building will help improve community safety and aid the government's pledge to modernise Victoria's Youth Justice system. The Centre will include beds for remand and sentenced young offenders, a mental health unit and a concentrated intervention unit.
