

Clock View, situated in Walton, Liverpool, replaces the old Walton Hospital which once stood in its place. The £25m site will provide the city's new psychiatric intensive care unit for urgent inpatient care.

The facility will treat local people for a range of mental health issues, providing 80 individual bedrooms all with en-suite bathrooms across five wards.

Designed to improve the patient's experience, the building provides a therapeutic environment combined with patient-centred care to improve recovery, wellbeing and reduce lengths of stay. Light airy spaces, communal activity areas and safe inner courtyard gardens help to aid people's recovery. To help meet the required specification, DVS Safe Ensuite Sanitaryware, WC Flushing, No-touch Sensors, Control Systems and more were chosen for installation. These products incorporate strong, safe, reliable and water efficient design features that are very well suited to the mental health sector. Products installed, include; Safe Ensuite WC pans, all-in-one mirror and basins with backplates, Washroom Control Systems, Anti-vandal wave-on sensors, Standard Concealed Cisterns, TMV's and solenoid valves.

The order was supplied by DVS and installed by Dowds Group (Mechanical, Electrical and Specialist Contractors). After a lengthy build time of 22 months, Clock View Hospital opened its doors in February 2015.
