

Banks Road Primary School, Liverpool, prides itself on creating an environment where pupils can achieve their highest potential. The school and its team work hard to nurture a climate where all children, regardless of gender, race or disability, can thrive and grow in self-esteem. The school was looking for a washroom revamp to coincide with the school's dedication to providing a safe, secure, and supporting environment for their pupils. The project was carried out by [Inspired Washrooms](#), a Nottingham based fit-out company, which came up with a fun, colourful and contemporary design to renovate the school washrooms, using a range of KWC DVS specified products.

The full range of products provided are as follows:

- 4 x [SOLX1800T](#) Washtroughs with 3 wash places and tap holes
- 13 x [F3SV1001](#) F3S self-closing pillar tap
- 18 x [WC03-002](#) Standard WC Flushvalve Kit with Wave-On Sensor – 1 1/2" Base – c/w 3m Cable
- 18 x [WC02-011](#) Concealed plastic cistern kit – 1 1/2"

The fit-out took place over a three-phase long period starting in October 2021. Miranit washtroughs are ideal for busy environments due to their built-in waste, overflow, and durable yet stylish design. The F3S self-closing pillar tap exhibits properties ideal for a child-friendly area with its adjustable flow time and polished chromium-plated brass finish, rendering the surface coating resistant to corrosion and wear.

Chris Kightley, Managing Director of [Inspired Washrooms](#), commented, "We work with KWC DVS on a recurrent basis and can always count on them to provide us with quality products. A trusted partner, we've worked on many projects together. Their Miranit composite range and their F3S self-closing pillar taps were perfect for the playful but functional washroom refurbishment Banks Road Primary School was after."
