

KWC DVS

A guide to Miranit

KWC. The Ultimate Choice

Miranit clean and care

The Gelcoat surface of Miranit is dirt repellent and particularly easy to care for. In most cases a damp cloth is completely adequate for cleaning the washbasins.

More serious soiling can be removed with mild, non-scouring cleaners. This also applies to colour pencil traces, shoe polish, ink, iodine solution and lipstick. Stains that could result from burning cigarettes, for example can be removed with a polishing agent.

Sustainability

For a sustained shine it is recommended to occasionally rub Miranit products with commercially available car polish and then immediately re-polish the treated surfaces.

Care and repair

Damaged surfaces can easily be repaired with special kits readily available from KWC DVS, get in touch for more details.
